Recent reports show that morbidity and mortality as a result of liver disease is on the rise especially in Africa. This contrasts with the enormous progress made in the diagnosis and management of liver diseases globally. This workshop will bring together international and regional experts to share latest research and discuss opportunities to further improve clinical management of patients with liver disease. This meeting will empower regional experts by providing them with the unique and very much needed opportunity, to not only learn the latest in advancements, but to present their own research and discuss their challenges.
ADDRESSING CAUSES OF LIVER CIRRHOSIS AND HEPATOCellular CARCINOMA IN AFRICA

We will provide delegates with a highly scientific and educational abstract-driven conference consisting of state-of-the-art lectures, oral and poster abstract presentations, roundtable discussion, debates and ample time for discussion.

This meeting will serve as the catalyst for translating scientific achievements into clinical practice. Delegates will have an exceptional opportunity to share and acquire knowledge and experience on a wide spectrum of topics that are related to liver disease.

JOIN US AT THE INAUGURAL EDITION OF:
THE CONFERENCE ON LIVER DISEASE IN AFRICA (COLDA)

We will provide delegates with a highly scientific and educational abstract-driven conference consisting of state-of-the-art lectures, oral and poster abstract presentations, roundtable discussion, debates and ample time for discussion.

This meeting will serve as the catalyst for translating scientific achievements into clinical practice. Delegates will have an exceptional opportunity to share and acquire knowledge and experience on a wide spectrum of topics that are related to liver disease.

The COLDA meeting is a highly educational and scientific meeting focused on liver disease in Africa. By bringing together international and regional experts, the conference will encourage the exchange of the latest research and treatments among all those working on liver disease in Africa. Ultimately, empowering healthcare professionals to prevent, treat and achieve cure for liver diseases to the benefit of patients in Africa.

The meeting will cover, among others:
- introduction to viral hepatitis and liver diseases
- the current distribution of liver disease in various African countries
- management of hepatitis B chronic infection
- advances in hepatitis C treatment options
- non-viral hepatitis related infections
- clinical management of end-stage liver disease
- non-infectious induced liver disease

We look forward to welcoming you to COLDA!
