Symposium 5-2 ART AND REPRODUCTION	CME: 4:00 PM - 6:00 PM
Room 6E Target Audience: This session is directed to clinicians and scientists who are interested in understanding the current state of knowledge regarding the use of antiretroviral therapy in women of reproductive potential and the potential impacts of antiretrovirals on maternal health and pregnancy outcomes. Level of Knowledge: It is assumed that the participants have familiarity with issues of HIV treatment and prevention of mother-to-child transmission, as well as basic understandings of the processes of conception, gestation and delivery. Objectives: At the completion of the session, participants will be able to: <ul style="list-style-type: none">Describe the existing evidence for associations between contemporary ARTs and birth defects in the context of state-of-art ART treatment.Elucidate issues facing clinicians, policymakers, and researchers related to this topic.

CAN POSITIVE PEOPLE HAVE HIV NEGATIVE CHILDREN?

YES!

ART protects your baby from HIV during pregnancy, birth and breastfeeding.

Talk to your nurse or doctor about it.

CHANGING YOUR DRUGS?
Don't panic!

Talk to your doctor or adherence counselor
Ask questions until you're satisfied with the answers
Agree with them on the actions you need to take
Take your drugs as prescribed
Take control of your health

MODERN ART – NOVEMBER 2018

ART

PREGNANCY & WOMEN'S HEALTH

Everyone with HIV needs to take HIV treatment – called antiretroviral therapy, ART or ARVs

Creating demand
